Russian: native

English: intermediate

## EDUCATION

2018: USPU, Russia Faculty of International Relations

2022: Ulearn, Software testing

2022: Yandex, Software testing

## ABOUT ME

*I'm a promising testing specialist with strong soft skills and good technical base knowledge. I have extensive experience in IT industry. I had started my career as an HR specialist in a big IT company and then I changed it to IT analyst, but now I'm looking for a job in the QA field.*

*At my previous job I worked as an IT analyst. I did many different tasks, including QA. But soon I realized that performing testing tasks is what I enjoyed the most. I decided to evolve in this field and took a lot of QA courses. They gave me a solid theoretical foundation and practical experience.*

*My colleagues and team leads say I am a responsible, proactive and positive thinking person. And I will be happy to prove it again in new company.*

*By the way, I already know the difference between Agile & Waterfall, UI & UX, API & webhook, so my mentors won't need to spend their time explaining the basics to me.*

## EXPERIENCE

QA engineer | Wallester, Fintech company

July 2022 – Present

Tallinn, Estonia

- Exploring the product, product architecture and entity connection
- Creating tasks and bug reports
- Creating and updating test cases in TestRail
- Manual functional, smoky and regression testing for mobile applications (iOS/Android)
- Working with a database
- Writing API requests

IT Analyst | BeaversBrothers, Web-studio

April 2021 – January 2022

Yekaterinburg, Russia

- Processing a project request and discussing it with developers and customers
- Participation in the writing of technical specifications
- Verification of completed tasks for compliance with specifications
- Testing web pages on different devices
- Beta testing of the final products
- Getting customer experience feedback, passing it on to the developer and verifying that the final product meets the customer's requirements
